

Audiologist

Audiologists evaluate, diagnose, and treat hearing disorders and communication problems. These professionals use sounds and test equipment to evaluate a patient’s hearing and determine the extent of any hearing loss. Examples of services:

- instruct and counsel patients on hearing health care, including inner-ear injuries or disease that may affect the individual’s sense of balance
- recommend and fit hearing aids or other amplifying devices
- refer patients to physicians for medical diagnoses and additional care if needed

Education

Graduate degree from a [Department-registered](#) audiology licensure program, or the equivalent

Experience

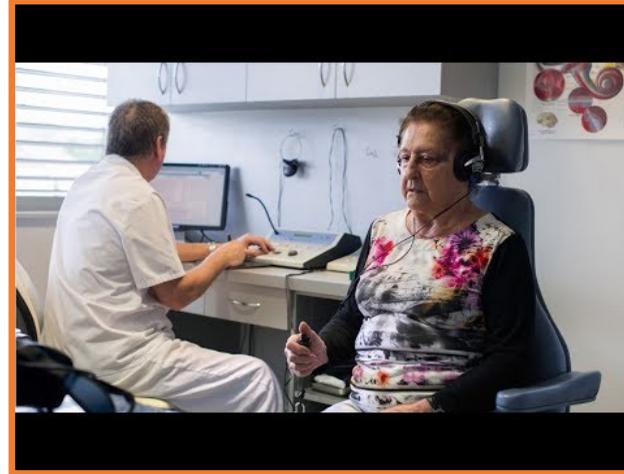

At least 36 weeks of supervised experience in audiology, including direct clinical work

Examination

Specialty area test of the Praxis Series, Praxis II, administered by the Educational Testing Service in audiology

► See the [Office of the Professions](#) for a listing of all options and requirements.
